

## BaseMatte

Reflecmedia have not only used Chromatte to create a studio background but have also developed BaseMatte.

### Specialist Chromatte flooring

BaseMatte has been specifically designed to be utilised as flooring. It is Chromatte cloth laminated to a close cell, high density, resilient neoprene rubber base that provides a flat, even surface. This backing forms easily to most carpets and solid floors and provides a flat chromatte panel with no creases. When used with a ChromaFlex or Chromatte curtain it will enable the cameraman to frame full body shots.

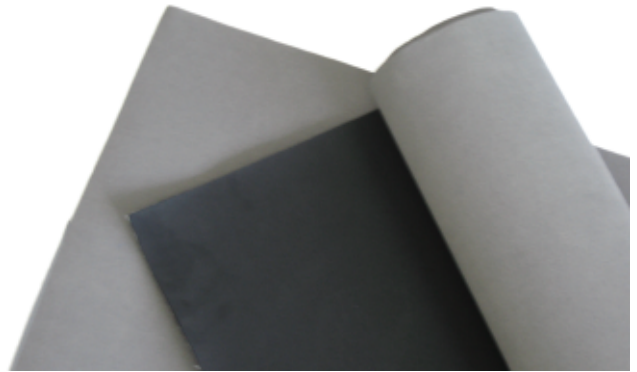

### Adaptable

Reflecmedia deliver BaseMatte in 2m x 1.4m tiles. Should a larger area of BaseMatte be required, Reflecmedia have developed a Chromatte tape which can be used to join together as many pieces of BaseMatte as is needed to cover the desired space, thus allowing a user to tile a Chromatte floor.

Chromatte tape can be used to cover and mask microphone cables and other unwanted studio equipment.

Accidents do happen in a studio - spilt drinks on the floor or marks left by footwear - BaseMatte tiles can easily be replaced, unlike an entire studio floor.

This is a further addition to Reflecmedia's award winning range of Chromatte products and expands our customers' Chromatte capabilities.

### Features

- Non-slip
- Flexible & versatile
- Pressure resistant
- Provides a flat, even surface
- Can form to existing studio floors
- Can tile a floor
- Easily replaceable
